> Summer school description <

The CaVaReM summer school brings together advanced undergraduate, master and PhD students from various disciplines, including but not limited to (bio)medicine, materials science and chemistry. The course sets off with an interactive session with a cardiovascular patient. Guest lectures from both clinicians, biomedical scientists and basic scientists are combined with a translational mind-set including the business point of view. All lectures and workshops are given by experts in the field.

This active and highly interactive programme is designed for students with different scientific backgrounds. Through guest lectures and innovative assignments, new solutions to problems within cardiovascular regenerative medicine will be identified and presented at the end of the summer school.

The highly-rated summer school combines a scientifically challenging topic with an easy-going atmosphere and excellent social programme with plenty of possibilities to enjoy the exciting city of Groningen. The programme is organized by the University Medical Center Groningen, the Campus of the Zernike Institute for Advanced Materials (ZIAM) and the Engineering and Technology Institute Groningen (ENTEG).

Students who are interested in regenerative medicine or tissue engineering who would like to learn more about how to apply this in cardiovascular medicine are highly encouraged to apply!

"The course was amazing; the speakers were brilliant and the interaction we had with them was fantastic."

Samuel Pugliero, Brazil (CaVaReM 2017)

> Academic coordinators

Prof. Dr. M. C. Harmsen
Dr. P. van Rijn

> Fees

€ 300 (excluding housing)
€ 600 (including housing)

> Target audience

Advanced undergraduate, master and PhD students from (bio)medicine, chemistry, materials science, biology, pharmacy and biotechnology

> Language of instruction

English

> Application deadline

15 April 2018
